

Northeast Small Fruit Pest Issues Tour

August 25-27, 2009

Ann Hazelrigg, PSS Department, UVM, Burlington, VT 05405

Pest identification and knowledge of successful IPM strategies are crucial for the successful small fruit farm.

Small fruits are an economically important crop for New England and an important component of many diversified vegetable farms.

A Small Fruits IPM Working Group funded by a grant from the NEIPM Center invited specialists from NE to develop and direct IPM priorities for small fruit stakeholders in NE.

To see priorities developed from the meeting go to the NE IPM Center website at <http://nepmc.org/>
